

**SUMMARY OF LLWR EMERGENCY ARRANGEMENTS PROGRESS
(Period March 2010 - September 2010)**

Operations Demonstration exercise

No demonstration exercises have been carried out during this period.

The next demonstration exercise will take place on 7th October 2010

All actions from the previous demonstration exercise were closed out within a short period after the exercise.

General

- Emergency exercise programme running to schedule
- Outcomes from the exercises are action tracked. Currently no outstanding issues.
- Two real events occurred where items were unearthed on the trench cap (as a part of the installation of a new drain) that were initially suspected to be World War 2 ordnance. Exercises had been carried out for discovery of hazardous material on the trench cap. The response to both real events went well. Arrangements for reception and briefing of the Explosive Ordnance Disposal (EOD) team were positive. In both cases the material was found to be non explosive.

Radsafe

LLWR routinely attends various Radsafe Director, Board and Working group meetings. Arrangements for practical recovery of an LLWR consignment in a road or rail incident have been developed and practised. It is hoped to carry out a joint exercise with Sellafield in late 2010 to test these arrangements.
